

Fall Prevention Program Efficiency Scale

We are asking you to complete the Fall TIPS efficiency scale. Completion of this scale will take 5-10. Please read each item and check the degree with which you disagree or agree with them.

Is Fall TIPS the only fall prevention program you have used?	<input type="checkbox"/> YES <input type="checkbox"/> NO
--	---

Our fall prevention program conserves our time because:	Response			
	SD	D	A	SA
1. no extra work is required since components of our fall prevention program are integrated within our work flow.				
2. the resources we need to carry out the program are readily available.				
3. we know if a patient needs to have a bed alarm activated or not.				
4. we know a patient's ambulation status.				
Our fall prevention program wastes our time because:	SD	D	A	SA
5. of not being sure if the plan in the patient's room is current				
6. of the steps needed to update the plan in the patient's room.				
Fall TIPS is worth the time it takes because we:	SD	D	A	SA
7. do not have to spend time to check toileting procedures etc. since patients' fall prevention plans are visible in their rooms.				
8. found it easy to use once we became familiar with it.				
My opinion about Fall TIPS is that:	SD	D	A	SA
9. involving the patient and asking questions while conducting the fall risk assessment is helpful.				
10. observing the patient's capacity to ambulate during the fall risk assessment is helpful.				
11. planning fall prevention interventions with the patient is helpful.				
12. involving the family with the patient's fall prevention plan is helpful.				
13. having actionable/tailored fall prevention information versus just knowing "low, medium, high fall risk" is helpful.
